

Safety Notice

Seamate Ve-1 Hydrostatic Release Unit with Serialnr start with 1209.... & 1210...

T-ISS & Seamate try to improve the marine safety standards with our products. In order to get the best safety standard, please review this Safety notice.

The Seamate Ve-1 hydrostatic release unit is designed to be fitted towards Liferrafts & Epirbs. Our Liferaft HRU with a rope connector made in september 2012 showed a potential defect in tensionstrength, this effected the models with a rope connector not the standard models which are fitted with a knot see picture below.

The left model is the affected HRU model with connector

The right model with knot is **not** affected and in good order

A small amount of HRU with a connector have been distributed worldwide. An immediate recall action of T-ISS & Seamate resulted that almost all these HRU returned back to our warehouse. However some Units have been already distributed towards Shippers & Chandlers.

If you discover a Seamate HRU on your liferaft with a ropeconnector fitting (without a knot) with a serialnumber starting with 1209 /1210 please contact the nearest servicestation in order to replace the HRU.

The serialnumber can be identified on the side of the HRU.

All HRU manufactured with a knot or with another serialnumber than 1209/1210 are not affected by this Safety Notice
